MedicSolution delivers X-ray facility to the health center in Funäsdalen

MedicSolution Nordic AB has won the contract to deliver an X-ray facility to the health center in Funäsdalen, Region Jämtland Härjedalen, in October 2022.

The project involves the delivery of a turnkey temporary X-ray building containing new skeletal X-ray equipment. In total, the building is made up of two modules that will be connected to a corridor that links to the existing building to meet the business' needs for easy access. The project will begin shortly, and production will take place in the production plant in Emtunga, and then delivered to the Region during October 2022.

- We are proud to be able to deliver another highly specified building to the Swedish market and now in close collaboration with the X-ray equipment supplier Siemens Healthineers. I am glad that we have been able to meet Region Jämtland Härjedalen's requirements for a fast delivery of the X-ray facility, so it's up and running in time for the next ski season. Short delivery time is a great advantage with our way of building and delivering more complex societal critical projects. I hope that when we summarize the project in about six months, it can help other hospitals and Regions to solve bottlenecks and find a viable path in their projects from a time and cost perspective, says Jörgen Stenqvist, Sales Manager, MedicSolution.
